

Hello, and thank you for trying Sick Profile Maker.

When you first open Profile Maker a warning message will be displayed, this message can be disabled after reading by clicking the check box that reads "Don't show this warning next time".

After closing this warning Profile maker will check to see if you have created any profiles, if not you will be prompted to open the user manager.

The user manager

To open the user manager, click the red faced icon labeled user manager.

The basic tab will be displayed. For the most part this is all generic information required to setup an account with the various web sites we use. To save time we have created an auto user function which will randomly automate this task. If you wish to randomize this further the Username is also spinnable.

Please note that the email field listed here needs to be a real email address, and the same one used on the email tab.

The screenshot shows a window titled "User Manager 2.00.0001" with a menu bar containing "User" and "Help". Below the menu bar are several tabs: "Basic", "Descriptions", "Links", "RSS Feeds", "Email", and "Captcha". The "Basic" tab is active and contains the following fields:

- Profile Name (with a green question mark icon)
- Display Name (with a green question mark icon)
- Profile Description (with a green question mark icon)
- Complete Name (with a green question mark icon)
- Password (with a green question mark icon)
- Username (with a green question mark icon and the text "{spinnable}" next to it)
- Email (with a green question mark icon, circled in red)
- Date of Birth (with three dropdown menus for month, day, and year, currently showing "Jan", "1", and "1950")

At the bottom right of the form are two buttons: "Auto User" and "Save".

The descriptions tab is next.

- Tags
- About me
- Personal motto

Are all required, and you have the ability to spin each. Examples of the spinning context are supplied on the right hand side and are fairly easy to understand. Internal spins are also available or spins within spins.

Tags

* Spaces separate tags and double quotes create multi-word tags (e.g. "fun game")
** This textbox is spinable ex. {spintext 1|spintext 2}

About Me/Description

* Give a brief description of yourself
** This textbox is spinable ex. {spintext 1|spintext 2}

Personal motto

* Your motto is a short description
** This textbox is spinable ex. {spintext 1|spintext 2}

Auto User Save

The links tab is one of the most important features here. This is where you will enter your Keywords, and URLs. The title box is your keyworded URL, the titles are spinnable and a sample is again provided. The URL box is also spinnable so that you can use multiple URLs if needed. The advanced section allows you to use a ## feature and is compatible with other major link building software syntax. Please note that if you are using the advanced function you must select the checkbox Use Advanced Links. Internal spins are also available or spins within spins.

The screenshot shows the 'User Manager 2.00.0001' application window. The 'Links' tab is selected, showing three main input sections:

- Title (Also used in pinger title):** A spinnable text box with a help icon. A note states: "* This textbox is spinnable ex. {spintext 1|spintext 2}"
- URL (Also used in 'website' form field):** A spinnable text box with a help icon. A note states: "* A URL is a 'Web page's address It usually looks like 'http://www.example.com'" and another note: "** This textbox is spinnable ex. {spintext 1|spintext 2}"
- Advanced Links [compatible with major link building software]:** A large text area with a help icon. A note states: "* It works like this URL ## TEXT" and another: "** One Url per line". An example is given: "**** ex. http://example.com##{great site|examples}"

At the bottom of the form, there are three options:

- Use Advanced Links (indicated by a red arrow)
- Add all links
- Add random links

Buttons for 'Auto User' and 'Save' are located at the bottom right of the window.

The RSS feeds tab is very similar to the links tab,

- Title
- Links

Are both optional and used when allowed on a site by site basis. Examples of the spinning context are supplied on the right hand side and are fairly easy to understand. Internal spins are also available or spins within spins.

Auto User Save

The email tab is used for the automated email verification. To the right some of the more popular email providers are shown. Clicking each will auto populate the email information for

- POP Hostname
- SSL Value
- Port

Your Login and Password are still required. If you would like to use your own mail server, or another provider not listed click on other. You can then manually enter the values to the left. The automated email verification requires that Microsoft dot net version 3.5 or better is installed, and should be used with a new email account. Email accounts with more than 250 messages are not supported. When finished with your configuration click the test button to ensure your settings are correct.

Auto User Save

The final tab in the user manager is the captcha tab. The captcha tab is not required but will help to automate your link building. We partnered with Decaptcher and ByPass Serial to offer this feature. Please note you must setup an account with either provider enter your details here and change the captcha provider accordingly. If using Deacptcher you must login to the decatcher.com site and find your port number, after entering the Decaptcher info click test to ensure correct information. Click save to save this profile. If you have created other profiles you can click User, then open and select your user file. You can then edit or copy that user. Lets close the user manager and move on to the program.

******Note, after editing the active profile, you will need to click the open folder icon, and reload your profile so the modifications are active.***
